

Special Issue

Causes, Symptoms and Treatments of Musculoskeletal Diseases in Dogs and Cats

Message from the Guest Editors

This Special Issue will supplement existing literature by providing an updated and interdisciplinary perspective that bridges gaps between experimental research, advanced imaging, biomechanics, pain assessment, rehabilitation, and emerging medical and surgical treatments. By compiling original research articles, systematic reviews, and clinically relevant case studies, this Special Issue will highlight recent innovations and unresolved challenges in small animal musculoskeletal medicine. In doing so, it will serve as a comprehensive reference for researchers and clinicians, fostering translational applications and encouraging future studies that address current limitations in prevention, diagnosis, and treatment strategies.
