

# Special Issue

## Advances in Fish Reproduction

### Message from the Guest Editor

As the world population is expected to reach 9.6 billion by 2050, there is an urgent need for sustainable protein production with a limited environmental impact. As a substantial contribution to our food supplies, the reproductive biology of fish remains a hot topic in the current research field. We are glad to announce that we are opening a new Special Issue: *Advances in Fish Reproduction* to provide international, peer-reviewed articles services for scientists engaged in all aspects of fish reproduction. This Special Issue will focus on recent advances on various reproductive phenomena in fish, including reproductive physiology, endocrinology, embryology, and sex differentiation etc. Research articles, review articles as well as short communications are welcomed.
