New Species and New Feeds for Aquaculture

Message from the Guest Editor

The high number of farmed species is one of the most relevant aspects that distinguishes aquaculture from other sectors of animal production. Although the total number of aquaculture species is increasing annually with new species being farmed around the world, several of these species disappear in a medium–short period of time. The evolution of aquaculture diversity is influenced by technological innovation and progress. Is aquaculture diversity real, or is it an optimistic projection of researchers' expectancies? Not only are new species being constantly introduced in aquaculture for potential farming but also new feeds and ingredients for aquaculture species. But how many of these ingredients and potential feeds are really suitable for the aquafeed industry? This Special Issue will provide a rational and pragmatismal vision of these aspects, in their current situation, that are fundamental to the future of aquaculture.

About the Journal

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2024, ranks 15/86 (Q1) in 'Agriculture, Dairy & Animal Science'; 21/170 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Editor-in-Chief

Prof. Dr. Clive J. C. Phillips

1. Curtin University Sustainable Policy (CUSP) Institute, Curtin University, Kent St., Bentley, Western Australia 6102, Australia
 2. Former Foundation Professor of Animal Welfare, University of Queensland and Foundation Director, Centre for Animal Welfare and Ethics, University of Queensland, Brisbane, Australia
