Management of Wildlife with the Goal of Localised Eradication

Message from the Guest Editors

In 2016, the New Zealand government announced the ambitious goal of a predator-free New Zealand (removing possums, rats and mustelids) by 2050. Since that announcement, both private and publicly funded research teams have worked on scaling up existing tools and the development of new control tools to help achieve this goal. We invite original research papers that address improved methods for the large-scale monitoring and removal of mammalian pests, with the goal of localised eradication. Additional topics may include the use of machine learning for automatic classification of animals from photos and/or video, and techniques to reduce the risks of control for non-target species.

About the Journal

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2024, ranks 15/86 (Q1) in 'Agriculture, Dairy & Animal Science'; 21/170 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Editor-in-Chief

Prof. Dr. Clive J. C. Phillips

1. Curtin University Sustainable Policy (CUSP) Institute, Curtin University, Kent St., Bentley, Western Australia 6102, Australia
 2. Former Foundation Professor of Animal Welfare, University of Queensland and Foundation Director, Centre for Animal Welfare and Ethics, University of Queensland, Brisbane, Australia
