

## Special Issue

# Antimicrobial Resistance and Therapy in Intensive Care Unit

### Message from the Guest Editors

The objective of this Special Issue is to review the epidemiology and treatment of the key problem bacteria in intensive care units, trying to establish the best therapeutic scheme for each one of the most frequent resistance mechanisms. In addition, we will review new microbiological diagnostic methods and ways to optimize the performance of prescribed antibiotics.

#### Keywords

- ICU
- sepsis
- antimicrobial
- multidrug-resistant bacteria
- sepsis
- antimicrobial stewardship

## About the Journal

### Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
