

## Special Issue

# Global Perspectives on Antimicrobial Stewardship and Food Safety

### Message from the Guest Editor

Antimicrobial resistance (AMR) is a global threat that affects food safety and human health. To address this issue, a global approach is needed, involving

- **Better use of antimicrobials:** Using antimicrobials in food production more effectively;
- **Preventing and monitoring transmission:** Preventing and monitoring the transmission of resistance in the food chain;
- **Educational programs:** Developing and supporting educational programs for consumers and antimicrobial prescribers;
- **International collaboration:** Researchers and policy-makers collaborating internationally to reduce the spread of AMR.

Therefore, the main subject of this Special Issue includes any educational and/or training programs for antimicrobial stewardship to reduce or optimize antimicrobial use for livestock production and agrifood systems.

## About the Journal

### Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
