Antimicrobial Stewardship in Older Adults

Message from the Guest Editor

As the population ages, more older adults are admitted to emergency departments with suspected infections. Early recognition and timely antimicrobial treatment remain difficult in this group. The effectiveness of clinical scores and biomarkers is uncertain. Frailty, multimorbidity, and polypharmacy further complicate management and worsen outcomes. Older adults also face a higher risk of multidrug-resistant infections, increasing treatment complexity. Frail and medically complex older adults are often underrepresented in clinical trials, highlighting the need for individualized care. I support this Special Issue, which will address these challenges and recent research in antimicrobial stewardship for older adults and aims to advance the current literature.

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon
School of Chemistry and Molecular Bioscience, University of
Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
