

Special Issue

Antimicrobial Stewardship in Secondary Care across Different Resource Settings

Message from the Guest Editor

Antimicrobial resistance remains a global threat, more so today than ever before. Efforts to tackle antimicrobial resistance need to be implemented across different healthcare settings, in different countries facing different limitations and staff resources. In this Special Issue of *Antibiotics*, we would like to invite research, insights, and views on how antibiotic stewardship interventions are being developed, implemented, and evaluated in different countries and healthcare organizations. This Issue is open to both qualitative and quantitative research from high-, middle-, and low-income settings. **Keywords:** antibiotic stewardship; behaviour change approaches; implementation science; health inequalities

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon
