Global Partnerships in Response to Antimicrobial Resistance: From Policy to Practice

Message from the Guest Editor

Antimicrobial resistance (AMR) poses a critical threat to global health, disproportionately affecting low- and middle-income countries (LMICs) where health systems face infrastructure and resource constraints. While robust policy frameworks are essential, addressing AMR also requires actionable implementation through effective, real-world interventions and innovation. This Special Issue aims to highlight the unique intersection of global health partnerships in AMR, with a particular focus on initiatives in LMICs—from strategic frameworks to on-the-ground impact. We welcome contributions from professionals across the health sector—from academics, researchers, and policy makers to healthcare providers, implementers, and community health workers—sharing their practical experiences, innovations, and evidence-based solutions. Submissions may include original research, case-studies, and policy analyses that explore the design and implementation of AMR interventions, the influence of health partnerships, multidisciplinary, and collaborative work on national, regional, and local practices, and lessons learnt from global health initiatives.

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Prof. Dr. Nicholas Dixon
School of Chemistry and Molecular Bioscience, University of
Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
