

## Special Issue

# Antimicrobial Stewardship in the Management of Healthcare-Associated Infections

### Message from the Guest Editors

Healthcare-associated infections (HAIs) are recognized as an important global public health and patient safety issue. The World Health Organization estimates that out of every 100 patients in acute-care facilities, seven patients in high-income countries and 15 patients in low- and middle-income countries will acquire at least one HAI during their hospital stay. This Special Issue is focused on antimicrobial stewardship strategies targeting HAIs. We welcome the submission of manuscripts in the form of original research, brief reports, systematic reviews and meta-analyses, reviews, perspectives, opinions, and interesting cases that highlight antimicrobial stewardship efforts in preventing HAIs, such as (but not limited to) central line-associated bloodstream infections, catheter-associated urinary tract infections, surgical site infections, hospital-onset *C. difficile* infections, ventilator-associated pneumonia, and hospital-onset methicillin-resistant *Staphylococcus aureus* (MRSA) bloodstream infections.

## About the Journal

### Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
