Antibiotic Resistance: In the Perspective of Causes, Current Status, Mechanism and Reverting

Message from the Guest Editor

The surge of antibiotic-resistant bacteria brings huge challenge to modern medicine, which threatens human health and causes huge economic loss. Understanding the mechanism conferring antibiotic resistance is essential to develop strategy to overcome the resistance. Actually, tremendous progress has been made in the past decades in deciphering the key determinants of antibiotic resistance. However, an important aspect that is always being ignored is how can we can we revert the antibiotic resistance or resensitize antibiotic-resistant bacteria to current available antibiotics based on the identified mechanism? With this consideration, we propose this research topic that specifically address the mechanism that can be harnessed to revert antibiotic resistance. Therefore, we encourage submissions from a broad perspective that enhance our understanding of resistant mechanism and its use for reverting antibiotic resistance besides classical studies on genes, efflux pumps, antibiotic modification enzymes.

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
