Special Issue

Natural Alternatives and Their Synthetic Derivatives to Antibiotics

Message from the Guest Editor

This Special Issue aims to gather some of the most significant and recent contributions in the interdisciplinary area of medicinal chemistry, microbiology, pharmacology, pharmacognosy, and food chemistry, with a particular emphasis on the production/synthesis, isolation from complex extracts and full characterization, biological effects, uses, and toxicity of natural products and their semi-synthetic derivatives. The applications of natural active compounds must be strictly focused on bacterial infections, food contamination and preservation, in silico characterization, screening, inhibition of biofilm production and resistance development, herbal formulations, new mechanisms of action, structureactivity elucidation, chemically modified natural compounds with improved biological activity and their synergism with clinically approved drugs. Manuscripts on the biological activity of natural extracts without proper chemical characterization will not be considered.

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery. use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. Antibiotics is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon

School of Chemistry and Molecular Bioscience, University of Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
