

Special Issue

Antimicrobial Resistance: Primary Care Perspectives and Practices

Message from the Guest Editors

With the current pace at which the landscape and scope of primary care are constantly evolving, and with the impact of COVID-19 on different aspects of practices of primary care and public health, antimicrobial resistance remains a top priority challenge that needs to be tackled by healthcare policies and practices. Primary care perspectives and practices are at the heart of any initiatives/action plans aimed at addressing global/local antimicrobial resistance. Thus, this Special Issue is of particular relevance, as it will focus on discovering more about the primary care perspectives and practices pertinent to the smart use of antimicrobials. It is hoped that this Special Issue will be viewed as a suitable platform to share innovative interventions and practices toward streamlining our policies and their implementation regarding the appropriate use of antimicrobial agents globally.

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon
School of Chemistry and Molecular Bioscience, University of
Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
