# Antibiotic Stewardship Implementation Strategies

# Message from the Guest Editor

Antibiotic stewardship can optimize antibiotic treatment and reduce adverse events associated with antibiotics. Evidence has demonstrated that antimicrobial stewardship can significantly reduce infections and colonization with multidrug-resistant bacteria and Clostridioides difficile in hospital settings. Therefore. hospitals worldwide should utilize the existing resources to organize an effective interdisciplinary team. Antimicrobial stewardship programs (ASPs) have emerged as a key initiative aimed at optimizing antibiotic usage, improving patient outcomes, and mitigating the emergence of antimicrobial resistance. Fifteen years after the joint guidelines for developing institutional ASPs were devised, best practices are still poorly defined and can vary based on local practice patterns and the available resources. This Special Issue aims to evaluate how these programs can be implemented in hospital settings.

# **About the Journal**

## Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery. use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. Antibiotics is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

#### Editor-in-Chief

Prof. Dr. Nicholas Dixon

School of Chemistry and Molecular Bioscience, University of Wollongong, Wollongong, NSW 2522, Australia

#### **Author Benefits**

## **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
