

## Special Issue

# *Clostridioides difficile* Infection, 3rd Edition

### Message from the Guest Editor

We have established two successful editions of the Special Issue “*Clostridioides difficile* Infection”. There are over twenty excellent papers published. These papers shed light on several aspects of this complex disease, including the clinical course of *Clostridioides difficile* infection (CDI) and the mortality rate in different settings and patient populations, in addition to the risk factors for CDI recurrence and novel therapeutic approaches. This result encouraged us to launch a third edition on the same topic. As a continuation of the previous Special Issues, this third edition will also deliver an invaluable compendium of the latest studies on any aspects concerning CDI.

## About the Journal

### Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.
