

Special Issue

Antimicrobial Prescribing and Stewardship, 1st Volume

Message from the Guest Editor

Antimicrobial Stewardship as “a coherent set of actions which promote using antimicrobials in ways that ensure sustainable access to effective therapy for all who need them” (Dyar, O.J.; 2017) is critical (alongside e.g. infection prevention and control strategies) for tackling antimicrobial resistance/drug resistant infections. The Antimicrobial Stewardship issue will consist of manuscripts, which may include original research, review articles, case series and opinion papers. Relevant antimicrobial (antibiotic, antifungal) stewardship related topics will be considered for review. The content for this edition aims to include articles that recognize the theme for World Antimicrobial Awareness Week 2020 - United to preserve antimicrobials” with articles showing the impact of global collaborations and health partnerships invited. **Keywords:** Antibiotic utilization; Diagnostic stewardship; Antimicrobial stewardship education; Antifungal stewardship; Antimicrobial resistance

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon
