

Special Issue

Evaluation of New Molecules in Severe Infectious Diseases, 2nd Edition

Message from the Guest Editors

Hospital- and community-acquired Gram-positive and Gram-negative infections introduce substantial burdens in terms of morbidity, mortality, and healthcare costs.

The emergence of bacterial resistance to conventional antibiotics has become a commonplace and heightened concern about the need for new drugs endowed with broader activity, which are useful in cases of infections unresponsive to common antimicrobial agents.

Moreover, the introduction of new traditional antibiotics to counter these pathogens has frequently been closely followed by the emergence of resistant strains. For this reason, recent interest in the search for alternative therapeutics is growing, and identifying effective agents to treat multidrug-resistant infections with novel mechanisms of activity has become critical.

Guest Editors

Prof. Dr. Elżbieta Kamysz

Laboratory of Chemistry of Biological Macromolecules, Department of Molecular Biotechnology, Faculty of Chemistry, University of Gdańsk, Gdańsk, Poland

Dr. Oriana Simonetti

Dermatological Clinic, Department of Clinical and Molecular Sciences, Polytechnic University of the Marche Region, Ancona, Italy

About the Journal

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Editor-in-Chief

Prof. Dr. Nicholas Dixon
School of Chemistry and Molecular Bioscience, University of
Wollongong, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
