Message from the Guest Editor

Dear Colleagues,

Laboratory diagnostics is currently a dynamically developing field of medical science. Modern laboratory techniques are very sensitive and specific. They can measure tens of thousands of identical substances, even at very low concentrations. This would not be possible without the use of diagnostic antibodies. In this Special Issue, we want to focus on current laboratory diagnostic techniques using diagnostic antibodies. Currently, there are no collected studies that cover this subject across a wide range. We also want to go back to the old days, when the introduction of immunodiagnostic methods to medical laboratories revolutionized modern laboratory diagnostics and opened the possibility for patients and doctors to diagnose various diseases by determining very specific markers of various pathologies using ultrasensitive laboratory tests. All this would not be possible without the use of an immunologist and diagnostic antibodies.

Message from the Editor-in-Chief

Antibodies is a relatively new journal with a major focus on quick dissemination of knowledge related to antibodies, especially how to quickly translate basic research results to therapeutic applications. Because it covers all areas related to antibodies unexpected connections between different areas could be made, leading to major discoveries and opening new fields of research and development. This is enhanced by the large readership of the many antibody-related areas of research. A specific priority area is human monoclonal antibodies for therapy of diseases and aging.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q2 (Drug Discovery)
