

Special Issue

B Cell Antigen Receptor: Structure and Function

Message from the Guest Editor

This Special Issue of *Antibodies* focuses on the structure and function of the B cell antigen receptor (BCR) and the pre-BCR. Authors will cover topics of current research related to receptor structure, receptor signaling, interactions with co-receptors, receptor expression and distribution on the cell surface, receptor internalization and functional consequences of receptor expression, signaling, and internalization of antigen. How BCR structure and signaling support the normal regulation of antibody production vs. dysregulated antibody production in autoimmune disease will also be considered.

About the Journal

Message from the Editor-in-Chief

Antibodies is a relatively new journal with a major focus on quick dissemination of knowledge related to antibodies, especially how to quickly translate basic research results to therapeutic applications. Because it covers all areas related to antibodies unexpected connections between different areas could be made, leading to major discoveries and opening new fields of research and development. This is enhanced by the large readership of the many antibody-related areas of research. A specific priority area is human monoclonal antibodies for therapy of diseases and aging.

Editor-in-Chief

Prof. Dr. Arne Skerra

Institute of Biological Chemistry, Technical University Munich, Emil-Erlenmeyer-Forum 5, 85350 Freising-Weihenstephan, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Drug Discovery)
