closed (31 August 2018)

Message from the Guest Editors

Exercise-induced inflammation is a complex and multi-faceted response, lasting from hours to days after-exercise. This Special Issue aims to publish original research papers and reviews on aspects of the exercise-induced inflammatory response in animal and human models. Aspects include the interplay between oxidative stress and inflammation and potential strategies to combat such responses. Suitable topics include, but are not limited to, the following: the role of post-exercise inflammation in governing muscular regeneration and adaption; the paradoxical role of inflammation for post-exercise recovery; inflammation’s role in exercise-induced muscle damage; nutraceutical and applied strategies to combat inflammation.
Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal Antioxidants serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, Antioxidants has become a key forum for researchers to bring their findings to the forefront.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in the Science Citation Index Expanded (SCIE) - Web of Science, Scopus and other databases. Citations available in PubMed, full-text archived in PubMed Central.

CiteScore 2018 (Scopus): 4.88, which equals rank 8/115 (Q1) in "Clinical Biochemistry", rank 19/167 (Q1) in "Physiology", rank 47/407 (Q1) in 'Biochemistry', 59/375 (Q2) in 'Molecular Biology' and 42/265 (Q1) in 'Cell Biology'.
