Dietary Polyphenols and Neuroprotection II

Message from the Guest Editors

Polyphenols are naturally occurring molecules ubiquitous in plants. They are edible constituents of many food sources like wine, green tea, grapes, vegetables, red fruits, and coffee. Many studies using polyphenols have shown that they modulate several cellular functions and molecular pathways, with a significant impact on the prevention and treatment of various pathological conditions, like cancer, cardiovascular disorders, pollutant-induced cell damage, and also neurodegenerative diseases.

Neurodegenerative diseases are among the main causes of death worldwide and, in most of them, like Alzheimer's or Parkinson's, neurodegeneration occurs long before the onset of first symptoms, where a large population of brain neurons is already lost. Polyphenols are promising candidates for those strategies, either as prophylactic substances or as therapeutic molecules. We invite you to further explore all these issues, contributing with your prominent expertise to this Special Issue.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Editor-in-Chief

Prof. Dr. Alessandra Napolitano

Department of Chemical Sciences, University of Naples “Federico II”,
Via Cintia 4, I-80126 Naples, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
