Heme Oxygenase-A Balancing Act Between Cytoprotective and Pathophysiological Cascades

Message from the Guest Editors

Heme oxygenase (HO) is the rate-limiting enzyme in the oxidative degradation of heme, generating biliverdin (BV), carbon monoxide (CO), and iron, while consuming oxygen. Apart from its role as a principal component in the cellular heme/iron homeostasis, HO performs various other cellular processes, which differ among HO families. The function of HO-1 and HO-2, the two catalytically active isoforms of HO in mammals, has been extensively studied. This Special Issue will publish research papers or reviews presenting new findings or concepts on the role of HO and its reaction products in modulating cellular/tissue functions in health and disease. Suitable topics include (but are not limited to) the following: structure and function and regulation of HO and its products, the role of HO and its products in cell metabolism, signalling, cell cycle, epigenetic regulation, repair function, and the control of oxidative stress.

Guest Editors

Prof. Dr. Ulrich Göbel

Universität Freiburg im Breisgau, Department of Anesthesiology and Critical Care Medicine, Freiburg im Breisgau, Germany

Dr. J. Catharina Duvigneau

Department for Biomedical Sciences, Institute for Medical Biochemistry, University of Veterinary Medicine, 1210 Vienna, Austria

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Editor-in-Chief

Prof. Dr. Alessandra Napolitano

Department of Chemical Sciences, University of Naples “Federico II”,
Via Cintia 4, I-80126 Naples, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
