Hypoxia-Induced Oxidative Stress in the Brain

Message from the Guest Editor

Deprivation of the tissue of adequate oxygen supply, called hypoxia, usually involves damage of the tissue of organs it affects. The mammalian brain is a highly oxygen-consuming organ, which makes it especially sensitive to hypoxia. Brain hypoxia may occur in all age groups as a consequence of birth asphyxia, cardiac arrest, stroke, carbon monoxide poisoning or even sport activities like high mountain climbing or diving. Fathoming mechanisms of neuronal death triggered by free oxygen radicals formed in the brain under hypoxic conditions and reoxygenation as well as search for effective ways to suppress oxidative stress has occupied research for decades. This Special Issue "Hypoxia-Induced Oxidative Stress in the Brain" is dedicated to presenting current knowledge and future prospects on hypoxia-induced oxidative stress in the brain. We invite experts on various aspects of oxidative stress and its involvement in hypoxia induced brain damage. We welcome the submission of manuscripts either describing original research or reviewing the scientific literature in this field.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Editor-in-Chief

Prof. Dr. Alessandra Napolitano

Department of Chemical Sciences, University of Naples “Federico II”,
Via Cintia 4, I-80126 Naples, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
