Redox Signalling and Exercise

Message from the Guest Editor

Exercise can increase the metabolism of many biochemical pathways that are associated with the enhanced generation of reactive oxygen species (ROS). It is known that ROS are important, necessary regulators of cellular function and metabolism. It is under debate whether antioxidant treatment can attenuate or eliminate exercise-induced adaptive responses in skeletal muscle and in other tissues. The effects of exercise on skeletal muscle, the brain, and the liver are quite well studied, but further investigation is necessary in order to elucidate the exercise-induced redox regulation in the kidney, gut, and reproductive organs. This Special Issue of Redox Signalling and Exercise welcomes top quality original research papers and reviews so as to expand on our understanding and perspective on all aspects of redox homeostasis related adaptation, redox signalling, oxidative damage, and the repair process. Papers on the redox sensitive housekeeping process are very welcomed. We are very much looking forward to receiving papers on redox mediated epigenetics as a result of physical exercise.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Editor-in-Chief

Prof. Dr. Alessandra Napolitano
Department of Chemical Sciences, University of Naples “Federico II”,
Via Cintia 4, I-80126 Naples, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
