

Special Issue

Oxidative Stress and Newborns

Message from the Guest Editor

The difference in oxygen pressure at birth, from 25 mm (intrauterine) to 85 mm Hg (ambient air), induces a stress necessary to induce, among other things, the newborn's antioxidant defenses. However, conditions inducing exaggerated oxidative stress or a breakdown in redox homeostasis could compromise the newborn's overall metabolism, as well as the development of several systems and organs. As DNA methylation has been shown to be influenced by the redox environment, long-term effects on the newborn's health are also very possible. These conditions may include a genetic component; the mother's environment during gestation (diet, food supplements, medication, physical activity, etc.); the newborn's diet; birth conditions; prematurity; growth retardation; treatments received by newborns (parenteral nutrition, medication, etc.); etc. The aim of this Special Issue is to collect literature review or original data from clinical, animal, or in vitro studies. All studies concerning oxidative stress, the redox environment, the induction of antioxidant defenses, or the administration of antioxidant molecules in neonates are welcome.

About the Journal

Message from the Editor-in-Chief

It has been recognized in medical sciences that in order to prevent adverse effects of “oxidative stress” a balance exists between prooxidants and antioxidants in living systems. Imbalances are found in a variety of diseases and chronic health situations. Our journal *Antioxidants* serves as an authoritative source of information on current topics of research in the area of oxidative stress and antioxidant defense systems. The future is bright for antioxidant research and since 2012, *Antioxidants* has become a key forum for researchers to bring their findings to the forefront.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, PubAg, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Chemistry, Medicinal) / CiteScore - Q1 (Food Science)
