Trends and Prospects in Binding Proteins

Message from the Guest Editor

Binding proteins, through their unique energetically favorable formations, are responsible for the nexus of the molecular pathways responsible for the biochemical reactions that take place in cells. Mutations, protein modifications, agonists or antagonists, and stoichiometric alterations result in a variety of different phenotypes, gain-of-function, leaky function, or deleterious effects associated with diseases, therapeutic approaches, and applications of biotechnological interest. Modern high-throughput proteomic, NMR, and X-ray crystallography protein structure analyses and bioinformatics shed light on the complex protein nature, while genetic engineering provides the means for target modifications and testing of protein function. This Special Issue of *Applied Biosciences*, "Trends and Prospects in Binding Proteins", is dedicated to novel experimental research findings and to summaries of current trends and prospects in binding proteins biochemistry, cell biology, and applied biotechnology.

Guest Editor

Dr. Demetrios A. Arvanitis

Center of Basic Research, Biomedical Research Foundation of the Academy of Athens, 115 27 Athens, Greece

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Robert Henry

1. Queensland Alliance for Agriculture and Food Innovation, University of Queensland, Brisbane, QLD 4072, Australia
2. ARC Centre of Excellence for Plant Success in Nature and Agriculture, University of Queensland, Brisbane, QLD 4072, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

Journal Rank:

CiteScore - Q2 (Immunology and Microbiology (miscellaneous))
