

Special Issue

Mechanics Applied in Construction Engineering

Message from the Guest Editors

In contemporary construction engineering, structural performance demands are continually increasing. These include (but are not restricted to) resistance to fire, capability to absorb earthquake vibration, and damping towards winds in tall and slender structures... This Special Issue is thus devoted to all branches of mechanics that tackle challenges in the following fields:

- Modeling and realizing measurement chains and instruments for structural monitoring, aiming at the identification of key structural properties, in order to detect damage or property deterioration;
- Modeling various kinds of damage and structural deterioration in order to supply suitable data for the previous point;
-
- Designing simulation, laboratory, or in situ apparatuses in order to verify theoretical models and numerical outputs;
- Modeling, designing, and testing low-cost, low-impact materials and structural components (e.g., clay panels, pultruded beams).

Guest Editors

Dr. Giuseppe Ruta

Dipartimento D'Ingegneria Strutturale e Geotecnica, Università "La Sapienza", 00185 Roma, Italy

Prof. Dr. Raffaele Barretta

Department of Structures for Engineering and Architecture, University of Naples Federico II, 80125 Naples, Italy

Deadline for manuscript submissions

closed (31 December 2021)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Magd Abdel Wahab

Laboratory Soete, Faculty of Engineering and Architecture, Ghent
University, Technologiepark Zwijnaarde 903, B-9052 Zwijnaarde,
Belgium

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other
databases.

Journal Rank:

CiteScore - Q2 (Engineering (miscellaneous))
