

Special Issue

Microbiome in Ecosystem 2.0

Message from the Guest Editor

The microbiome consists of complex microbes and related molecules. Recently, the microbiome has been applied to various fields in order to develop a novel way for maintaining homeostasis or the balance of ecosystems. The understanding of the microbiome's interaction with its habitats including its host is still limited. This Special Issue is devoted to publishing original research and review articles on various aspects of the microbiome in ecosystems. Topics of interest include, but are not restricted to, novel methods for understanding the microbiome, the role of the microbiome in ecosystems, microbe–microbe interactions in the microbiome, microbe–host interactions, and microbe–environment interactions in various ecosystems.

About the Journal

Message from the Editor-in-Chief

Applied Microbiology (ISSN 2673-8007) is a peer-reviewed open access journal that provides an advanced forum for the international community to report and discuss established and emerging applications for microorganisms and their associated technologies. Research articles, reviews, and other publications are released online immediately after acceptance to provide timely unlimited free access to the scientific community and the general public. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Ian Connerton

Division of Microbiology, Brewing and Biotechnology, University of Nottingham, Loughborough LE12 5RD, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, EBSCO, and other databases.

Journal Rank:

CiteScore - Q2 (Biochemistry, Genetics and Molecular Biology (miscellaneous))
