Cellulose Nanocrystals (CNCs) as Versatile Material for the Biomedical Field

Message from the Guest Editors

In recent years, nanotechnology and nanomaterials have seen an exponential outburst in the biomedical field, allowing a breakthrough in both therapeutic approaches and in the development of new devices. Among the many nanoscale materials, cellulose nanocrystals have unique characteristics and have already shown very promising properties in the biomedical field. In addition, CNCs are biocompatible, biodegradable, and available on a large scale, unlike many other materials proposed for analogue applications. For this reason, we would like to propose a Special Issue centered on the topic “Cellulose nanocrystals (CNCs) as versatile material for the biomedical field.” 100% discount of Article Processing Charge will apply to the submissions accepted for publication in this Special Issue.

Guest Editors

Dr. Barbara La Ferla

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Angelo Maria Taglietti
Department of Chemistry, University of Pavia, I-27100 Pavia, Italy

Author Benefits

High Visibility:

indexed within Scopus and other databases.

Journal Rank:

CiteScore - Q2 (Materials Science (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 4.7 days (median values for papers published in this journal in the second half of 2025).
