

Sustainable Agriculture and Soil Conservation II

Guest Editors:

Dr. Concetta Eliana Gattullo

Department of Soil, Plant and
Food Sciences, University of Bari
"A. Moro", 70125 Bari, Italy

Prof. Anna Maria Stellacci

Department of Soil, Plant and
Food Sciences, University of Bari
"A. Moro", 70125 Bari, Italy

Dr. Mirko Castellini

Council for Agricultural Research
and Economics - Research Center
for Agriculture and Environment
(CREA-AA), 70125 Bari, Italy

Deadline for manuscript
submissions:

closed (31 March 2023)

Message from the Guest Editors

Soil degradation is one of the most topical environmental threats. A number of processes causing a decline of soil quality, specifically erosion, compaction, salinization, pollution, and loss of both organic matter and soil biodiversity, are strictly connected to agricultural activity and its intensification. Several natural mechanisms of plants and microorganisms have also been usefully applied to control weeds and pests, as well as to abate soil pollution. Collaboration among different scientific disciplines has increased the ability to investigate problems and find practical solutions. In particular, the availability of innovative methods for rapid and accurate soil–plant system monitoring (proximal sensors, expeditious methods), for soil characterization at the microscale (X-ray based techniques), as well as for data analysis, has improved the understanding of soil processes and the adoption of sustainable management options.

This Special Issue welcomes original research papers and reviews focusing on recent advances and novelties in the field of sustainable and conservative agriculture. Multidisciplinary investigations are strongly encouraged.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
