Message from the Guest Editors

Dear Colleagues,

Concepts of sustainable food production and food products as health and wellness promoters, the use of alternative ingredients such as new protein sources, or the use of by-products in designed thought food or feed formulations according to bioeconomic principles, are current topics that act as driving forces for innovation. In the creative process, the food macromolecules (proteins and polysaccharides) are the major players for the creation of relevant food structures such as foams, emulsions, and gels. The development of gluten-free or vegetarian products by using alternative proteins and polysaccharides, as well as the use of food industry by-products as sources of these structuring biopolymers, along with the structural implications of adding protein and/or fiber-rich healthy ingredients (e.g., macro or microalgae, psyllium) are some of the challenges in creating novel food or feed products.

You are cordially invited to contribute to this Special Issue entitled “Eco-Novel Food and Feed”—a daring and trendy subject.

Assoc. Prof. Isabel Maria Nunes de Sousa

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
