Message from the Guest Editors

Dear Colleagues,

The dynamic development of methods related to the acquisition and management of spatial data creates better conditions for identifying, forecasting, and preventing the negative effects of natural hazards. Spatial planning relying on the use of information acquired from geographic information systems is an instrument that can be used for this purpose. Familiarity with these data and processes offers an opportunity to develop space in a way that mitigates the impact of natural hazards. Knowing the scale and scope of these phenomena is particularly important in view of the ongoing climate change whose effects will probably include an increased frequency of extreme hydrometeorological phenomena. This Special Issue will be dedicated to the following topics:

New methodological solutions for identifying and predicting natural hazards;

Spatial planning systems in various countries in the context of natural hazards;

Examples of good practices in the use of GIS in spatial planning in areas threatened by natural hazards;

Modeling natural hazards with GIS.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
