submissions:

closed (20 June 2022)

Message from the Guest Editor

Diverse organisms inhabit on the present Earth using versatile proteins exhibiting various functions. However, only a quite tiny portion of the extraordinarily large amino acid sequence space ($\sim 10^{130}$) has been used in extant organisms. Inversely stating this, it means that an immensely vast amino acid sequence space remains unused and, therefore, protein has a large potential ability hidden to generate new functions still now. On the other hand, it is important to understand how entirely new proteins were and have been generated during evolution to efficiently use the ability. In connection with this, I have proposed GC-NSF(a) hypothesis assuming that entirely new proteins are created from a nonstop frame on antisense strand of a GC-rich gene under a protein 0th-order structure. I believe that it would become possible to generate a number of artificial proteins with new functions through the application of the knowledge to new protein technologies. I hope that many researchers will participate in and contribute to development of a novel protein engineering.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
