

Soft Computing Application to Engineering Design

Guest Editors:

Prof. Dr. Chang Yong Song

Department of Naval
Architecture & Ocean
Engineering, Mokpo National
University, Joennam 58554,
Republic of Korea

Prof. Dr. Wu Deng

College of Electronic Information
and Automation, Civil Aviation
University of China, Tianjin
300300, China

Deadline for manuscript
submissions:

closed (20 August 2022)

Message from the Guest Editors

Products or machines manufactured through various design and production processes perform the functions intended by the engineer or researcher under various external environments and operating conditions. However, due to uncertainties in design, manufacturing, and testing, design variables or system parameters may fluctuate, and the desired function may not be performed properly. Engineering design is one of the most important development processes in various industrial fields such as shipbuilding and offshore systems, automobiles, mechanical systems, architecture, civil engineering etc. In general, in order to increase the reliability of engineering design, a design method that considers the safety factor based on experience has been widely used. Because it is difficult for an engineer or researcher to accurately ascertain the uncertainty occurring in the system, the safety factor is determined mainly based on past experience.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
