Message from the Guest Editors

Dear Colleagues,

Cultural heritage biodiversity has received much research attention in recent years. This Special Issue intends to provide a comprehensive examination of the science of biology and its practical application for the preservation of cultural heritage. In this issue, research papers or reviews on all aspects of biological causes, modes of action, biocidal treatment, and protection and prevention of cultural heritage are welcome, as well as biodeterioration of cultural heritage studies. Analysis and testing of macro- and microorganisms affecting the preservation of cultural heritage are also welcome.

The knowledge that has arisen from studies of biology applied to the cultural heritage area may be translated into new conservation and restoration treatments.

This issue addresses researchers from both academia and industry, working in microbiology and biotechnology.

This Special Issue does not include theoretical bioinformatics, medical microbiology or phytopathological microbiology.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
