submissions:

**closed (31 March 2021)**

### Message from the Guest Editors

Dear Colleagues,

Odors are today recognized as an important source of pollution and are therefore subject to control and regulation in many countries. In recent decades, there have been huge efforts from the scientific community to overcome the common belief that odor characterization is more art than science.

For this reason, this Special Issue of the journal *Applied Sciences* “New Frontiers in the Assessment, Monitoring and Control of Environmental Odors” aims to attract novel contributions covering the wide range of techniques that have been developed and used for the assessment of odor impact and annoyance, as well as the management and control of emissions.

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
