Message from the Guest Editors

We are inviting manuscript submission for a Special Issue on “Microbial Communities in Cultural Heritage and Their Control”.

Cultural heritage plays a key role in understanding the history of humankind, adopting appropriate strategies for its conservation is essential. Currently, microorganisms cause serious problems in the conservation of cultural heritage, however, most studies on microbial communities involved in the biodeterioration of cultural heritage rely on molecular identification, this is not sufficient to discern the origins and causes of a microbial attack, understand dispersion patterns, and prevent further undesired biodeterioration processes. It is necessary to understand the ecological characteristics or metabolic traits of microbial communities, which are critical in controlling microorganisms in cultural heritage.

This Special Issue is aimed at publishing outstanding papers presenting cutting-edge advances in the field of cultural heritage and the control of its biodeterioration.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
