Message from the Guest Editors

The use of new raw materials in assortment diversification is a necessity imposed by the depletion of conventional raw materials, obtaining functional foods, dietary foods, etc. Researchers in the field are moving towards for the discovery of new raw material resources, for example, raw materials that can replace animal proteins and fats, sugar and salt, gluten from bakery products, etc. The use of these unconventional raw materials in manufacturing recipes is a great challenge for specialists in the field, but also in terms of consumer acceptability and legislation in force.

The large number of raw materials in the attention of researchers in the food industry leads us to believe that this Special Issue of Applied Sciences Journal entitled "Unconventional Raw Materials for Food Products" will be a success. We look forward to the work of colleagues immersed in investigating the nutritional, functional and technological properties of new ingredients that can be used in food manufacturing recipes, and we look forward to new perspectives and challenges in this field.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
