Special Issue

Numerical and Mechanical Analysis in Biomedicine

Message from the Guest Editors

Most diseases arise due to imbalances in cell and tissue homeostasis which are affected by cell activity and differentiation. Cells can sense, respond, and adapt to mechanical stimuli, often differentiating between static and dynamic stimuli. Cell differentiation and reproduction can promote tissue repair and regeneration, thereby impacting the treatment of tissues, organs, and systems within the body. Mechanobiological studies can help explain macroscopic pathogenesis from the microscopic level through cellular activities. These studies are further enhanced when coupled with advanced numerical analysis techniques, including but not limited to finite element analysis, computational fluid dynamics, multi-physics modeling, multi-scale modeling, agent-based modeling, network analyses, and artificial intelligence (AI)-based methodologies.

This Special Issue aims to explore the potential of numerical and mechanical analyses in the biomedical field to accelerate the understanding of pathogenesis, accelerate drug development, and accelerate the development of novel disease treatments. We welcome numerical studies, experimental studies, and comprehensive reviews.

Guest Editors

Dr. Scott T. Wood

Dr. Elisabetta Zanetti

Prof. Dr. Arkady Voloshin

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32, 20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
