Analytical Chemistry: Techniques and Applications

Message from the Guest Editors

This Special Issue aims to disseminate articles for the rapid publication of original research papers, articles, and reviews on research developments in all areas of analytical chemistry, such as electroanalytical, spectroscopic analysis, and mass spectrometry. Articles considered for publication should focus on instrumentation development, improvements and applications, new sensors and applications in analyzing and quantifying active principles from different matrices, as well as the validation and development of analytical methods and methodologies. Thus, articles on analytical chemistry applied to similar areas of science, such as organic chemistry, geosciences, biological sciences, nanotechnology, engineering, and environmental sciences, will be considered.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
