Internet of Things Security: Latest Advances and Prospects

Message from the Guest Editors

Internet of Things (IoT) devices are becoming ubiquitous while IoT services are becoming pervasive. The applications of IoT in various sectors is increasing exponentially, which has given rise to new and ingenious adversarial threats against these application in general, and the devices in particular. Cyber-attacks and their applications are not new to our virtual world, but as IoT devices are deeply interwoven in our society, it is extremely important to come up with new security measures which are different and superior to the existing ones. This is mainly because the nature of data exchanged by IoT devices is different and hence the threats posed to the data are unique. Thus, novel and sophisticated security measures and techniques are needed which can help us safeguard critical infrastructure from these malicious threats posed by malevolent entities to the emerging applications of IoT. About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
