Environmental Pollution: Advances in Analysis of Emerging Pollutants and Their Removal Methods

Message from the Guest Editor

Emerging pollutants can be considered as one of the key environmental problems requiring a lot of research, to identify their sources, and their impacts on humans and ecosystems as well as develop technologies for their release prevention and removal. As priority groups of emerging pollutants can be considered pharmaceuticals and substances used in animal care, several groups of fluorinated compounds, microplastics and nanoplastics, nanomaterials and other substances and materials. However, the first and most important step is elaboration of reliable analytical methods, to support further activities aimed at their removal, considering removal from waste streams as well as considering removal from contaminated environments.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
