Advanced Manufacturing and Nondestructive Testing Techniques

Message from the Guest Editor

Metallic additive manufacturing (AM) is gaining in popularity in the industry and in the medical sector, particularly the powder bed fusion and the directed energy deposition categories of processes. In such critical sectors, the integrity and geometrical conformity to the numerical design of the manufactured parts need to be demonstrated. First, to limit the defects and deviations from the numerical design, the implementation of digital twins of the AM process chain is a solution. Second, to limit the defects during the AM process, the monitoring of the process, coupled with a feedback loop, involving artificial intelligence, is a solution. Third, to detect defects and deviations in the post-process AM parts, non-destructive testing (NDT) and metrology are required. However, the complexity in shape enabled by AM poses a challenge to the quality control of AM parts. X-ray Computed Tomography, implementing cone beam or synchrotron radiation, is the most performing NDT method. However, linear and nonlinear Resonant Ultrasound Spectroscopy, swept sine methods and Impulse Excitation Method, are alternative very performing methods for NDT.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
