

## Special Issue

# Advances in Dentistry and Dental Status Improvement

### Message from the Guest Editor

Minimally invasive treatment is the goal of modern dentistry. Several studies focus on determining the oral health status of different populations and how this can be improved by applying preventive or early diagnostic measures. On the other hand, the research and market launch of new materials are fundamental for the development of the profession and the improvement of patients' oral health. Advances in dentistry, in different areas, are necessary to improve the dental situation around the world. Therefore, we sincerely invite researchers to actively submit papers on "Advance in Dentistry and Dental Status Improvement". These papers are expected to present new techniques and materials in dentistry, the dental status of different populations and how to improve them. **Keywords:**

- caries
- prevention
- minimal intervention dentistry
- dental care
- risk factors
- atraumatic restorative treatment

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
