

Special Issue

Application of Supercritical Carbon Dioxide Power Cycles for Thermal Energy Storage

Message from the Guest Editors

High efficiency, flexibility, and competitive capital costs make supercritical CO₂ (sCO₂) systems a promising technology for renewable power generation in a low carbon energy scenario. Recently, innovative supercritical systems have been studied showing promising superior techno-economic features than steam cycles or ORC, particularly at high temperatures. Currently, our first experimental experiences are aiming to explore sCO₂ Brayton power plants and their coupling with power systems with low carbon heat sources, such as waste heat, concentrated solar energy, and geothermal. Application of Supercritical Carbon Dioxide Power Cycles for Thermal Energy Storage is a Special Issue for those who would like to publish original papers about technologies, models, and methodologies that could strengthen sCO₂ power cycles development. This Special Issue aims at presenting important results of work in sCO₂ advanced energy systems and their application for energy storage purpose. Works can be applied research, development of new procedures, energy systems (at cycle innovation and components level), original application of existing knowledge, or new design and modelling approaches.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
