Special Issue

Recent Advances in Quality, Safety and Sensory Analyses of Vegetable Food Products

Message from the Guest Editors

The application of non-conventional technologies or the use of different raw materials in the processing of vegetable food products seeks to respond to consumers' needs and desires. There is an increasing demand for foods with distinct characteristics and superior quality that are also safe, highly nutritious, and minimally processed. Furthermore, it is necessary to apply circular economy principles by reducing waste and valuing the by-products generated during processing by developing new products and applications. Thus, non-conventional technologies aim to obtain products that either preserve or do not negatively alter the physio-chemical, biological, and sensory characteristics of foods. The use of different raw materials, as well as the safety and economic viability of the applied technologies and products obtained, are equally important topics. Special attention will be paid to the following topics:

- High hydrostatic pressure;
- Supercritical fluids;
- Ultrasound:
- Atmospheric cold plasma:
- Ultraviolet radiation:
- Irradiation;
- Microwaves:
- Joule heating and pulsed electric fields;
- Intelligent packaging/active packaging;
- Use of different/alternative raw materials.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32, 20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
