Novel Smart Technologies in Water Resource Management

Message from the Guest Editors

In recent years, several innovations in the field of the application of sensors for water management have been gaining increasing strength and practicality. In this context, embedded systems, smart sensors, and other technologies can be fundamental in irrigation management, for example. We invite the submission of unpublished, innovative and high-quality contributions on any topics focused on applied sciences using concepts in the areas of water resources, among others.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
