Preparation and Processing of Materials in Dental and Oral Restoration

Message from the Guest Editors

In this edition, we are looking to publish cutting-edge research into new biomaterials, with a specific focus on polyfunctionality. The development of new biomaterials with antimicrobial, antifungal and antiviral properties presents our lines of research. Discussions should highlight the effects of these materials on the human body, their anti-inflammatory properties, their capacity to control destruction via mediation with MMps, and other more interesting perspectives such as their anticancer effect. Research at the molecular, cellular, in vitro or clinical level is welcome for inclusion in this Special Issue. **Keywords:**

- nanomaterials
- composites
- antimicrobial

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
