

Special Issue

Advances in Pests and Pathogens Treatment and Biological Control

Message from the Guest Editors

The European Commission Directive on Integrated Pest Management (IPM) requires the use of predominantly biological methods of plant protection, in line with society's expectations for the protection of the environment and human health. In this context, the research of new organisms (Biological Control Agents—BCA) with potential to replace existing pesticides is necessary. For this Special Issue, we are inviting the submission of both review articles and scientific contributions on comprehensive and new approaches to the problem of pest control in agriculture, horticulture and forestry. Practitioners and scientists (geneticists, entomologists, phytopathologists and other disciplines) are encouraged to join the discussion on the implementation of IPM in current practice, the development of new methods based on potential BCAs or other genetic methods (including genetically modified trees—GMT or GMOs). We welcome original research as well as review articles.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
