Assistive Technology for Rehabilitation

Message from the Guest Editors

"Assistive Technology for Rehabilitation" explores the design, development, and application of innovative technologies aimed at enhancing rehabilitation outcomes for diverse populations, ranging from children to older adults. This Special Issue focuses on cutting-edge advancements that support individuals with motor, sensory, or cognitive impairments, emphasizing translational approaches to improve functional recovery, independence, and quality of life. Topics include, but are not limited to, robotic systems, wearables, virtual and augmented reality, brain-machine interfaces, and AI-driven solutions tailored to assistive and rehabilitative purposes.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
